

CLOUD BACKUP & RECOVERY

If It's Not Offsite, It's Not Backed Up!

Your company's IT faces an onslaught of internal and external threats each day. Hardware failures, power outages, corruptions, ransomware, phishing, hacking, employee theft, human error, and even natural disasters. Despite those risks, only 26% of small businesses perform daily backups of their computer systems.

Could your business survive a major data loss? It can, if you have cloud backups!

Complete Support for Cloud Backups

PlanetMagpie has a team of Microsoft Cloud-certified engineers ready to setup, monitor, test, and safeguard your critical data. With PlanetMagpie cloud backups, you can protect:

-  Desktops, laptops, tablets and mobile devices
-  Windows Servers, SQL Servers, Exchange Servers, Linux Servers
-  Applications
-  Virtual Machines
-  Microsoft Office 365

Cloud Backup Features

- Hosted in Solarwinds' Atlanta datacenter with a mirrored backup to PlanetMagpie's Silicon Valley datacenter (for geographic separation and faster restores)
- Retention: 30 days, with 90-day retention available for SOX
- Encryption: 448-bit end-to-end Blowfish encryption
- Versioning: in case ransomware corrupts the latest version
- Deduplication: for lower storage and bandwidth consumption
- Customer Cloud Console: to view the health of your backups

Office 365

Do I Need Cloud Backups for Office 365? YES! Here's Why:

You might think Office 365's geo-redundancy serves as a backup. Geo-redundancy actually provides availability (access from anywhere), not recoverability (saving data offsite).

Hackers love to target Office 365. 75% of corporate Office 365 users suffer at least one compromised account each month.

Office 365 purges deleted files in 30 days. That includes files deleted by disgruntled employees, accidental deletions, deactivated email accounts, etc. This 30-day data retention is not SOX-compliant, so you'd need another solution to provide 90+ days of backups.

PlanetMagpie is located in the San Francisco Bay Area and Dallas/Fort Worth, and serves businesses across the United States.

Advantages of Deploying PlanetMagpie's Cloud Backup

- Backup a single workstation, a server, or your entire network
- Only pay for the disk storage your backups use
- One backup solution handles everything (email, file servers, databases, applications, workstations)
- Receive daily monitoring & issue remediation of your backups
- Schedule monthly or quarterly test restores to confirm long-term viability of your backups
- Get enterprise-grade network security of your cloud data

Luck is not a strategy!

Safeguard your data with Cloud Backup & Recovery. Call PlanetMagpie and we'll take care of it all.
