

# BUSINESS HOSTING

Do Away With Your Server Room—Host All Your IT at PlanetMagpie

PlanetMagpie's comprehensive IT service philosophy plays out in its Business Hosting datacenter. Need your company's website hosted? We've got you covered. How about just Exchange 2010 email? Or maybe your entire IT infrastructure with a VoIP phone system? Our datacenter is built for it.

PlanetMagpie's datacenter features top-of-the-line IBM servers, Juniper routers/firewalls, redundant communication lines with burstable bandwidth, two power sources, and battery banks with a failover generator. Our email is filtered by modusGate, one of the leading providers of business-grade anti-spam software.

We compete with big hosting companies and win on hardware and service quality. 75% of our hosting clients are in the San Francisco Bay Area, so they know exactly who's working for them. And when you call us, you'll talk with a live person.

## PlanetMagpie's Business Hosting Services

### » Hosted Small Business Server 2008

A complete small-business package with document storage, Exchange email, security, and Office Live integration.

### » Hosted Exchange Server 2007/2010

The latest Exchange-based email setup (2010 includes Conversation View and Archival) running entirely off-site.

### » Hosted Office Communications Server (OCS) 2007

Communicate with employees via IM, conferencing, LiveMeeting, and presence status. Our VoIP gateway also enables OCS to duplicate a PBX phone system.

### » Hosted Virtual Office

Run your entire office without a single local server. Including Small Business Server/Windows Server 2008, SharePoint, CRM, Exchange 2010, Active Directory, ERP, OCS 2007 R2, and Data Protection Manager 2007 (for secure backups).

### » Web Hosting

HTML/ASP.NET sites, SQL Databases, Sitefinity CMS, Miva Merchant, MS Commerce Server, Blogs, Forums, Web Applications, and FTP.

### » Colocation or Dedicated Hosting

Your own server or virtual server to run any software you like, with or without Managed Services.

### » Email Hosting/Filtering

Anti-spam measures at the firewall level.

» **Custom Backup Solutions** – Servers have different roles in an organization. These roles can't all be treated the same when it comes to backup strategies. We tailor frequency of backup jobs to fit the customer's sensitivity to data loss.

## BENEFITS

- » Cloud computing means no hardware or power bills, and lower in-house labor costs
- » Server/webmail access from anywhere—in the office, or out of the country
- » No loss in server speed compared to your local server response time
- » Full SaaS capability for Microsoft server software
- » The only company in the Bay Area hosting the Microsoft OCS VoIP phone system
- » Anti-virus/anti-spam/anti-phishing protection for your email
- » Backups with Microsoft Data Protection Manager 2010. Reducing your costs for tape and disk storage.

**Microsoft**  
GOLD CERTIFIED  
Partner

**Juniper**  
NETWORKS
